*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

#Macaulay duration is the measure of the weighted average time taken to get back the cash flows and is one comprehensive parameter portraying the risk-return profile of the bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. It is expressed in number of years or days. For further details please refer to the scheme information document.

Mutual Fund investments are subject to market risks, read all scheme related documents carefully.
